Ourra, S., Ikeda, H., Ishikawa, J., Hanamoto, A., Takahashi, C., Shinose, M., Takahashi, Y., Horikawa, H., Nakazawa, H., Osonoe, T., Kushida, N., Director-General of Biotechnology Center, Shiba, T., Sakaki, Y. and Hattori, M.

Direct Submission

Nicotal Sabmitted (29-MAR-2002) Director-General of Biotechnology Center, National Institute of Technology and Evaluation, Biotechnology Center; 2-49-10 Nishihara, Shibuya-ku, Tokyo 151-0066, Japan (B-mail:bio@mite.go.jp, UKL:http://www.bio.nite.go.jp/, Tal:81-3-3481-1933, Fax:81-3-3481-8444)

This work was done in collaboration with Haruo Ikeda(*1), Jun Ishikawa (*2), Akiharu Hanamoto(*3), Chigusa Takahashi(*3), Mayumi Shinose(*3), Hiroshi Horikawa (*4), Hidekazu Nakazawa (*4), Tomomi Osonoe(*4), Norihiro Kushida(*4), Hisashi Kikuchi (*4), Tadayoshi Shiba (*5), Yoshiyuki Sakaki (*6,*7), Masahira Hattori (*1,*7) and Satoshi Omura (*1,*3).

Final finishing process and all annotation were done by H. Ikeda and J. Ishikawa
                                                                                                                                                                                                                                                                                                                                                                                                                                   Ikeda, H., Ishikawa, J., Hanamoto, A., Shinose, M., Kikuchi, H., Shiba, T., Sakaki, Y., Hattori, M. and Omura, S.
Complete genome sequence and comparative analysis of the industrial microorganism Ereptomyces avermitilis
Nat. Biotechnol. 21 (5), 526-531 (2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /product="putative alpha-amylase"

Female blood DNA was isolated from one randomly chosen donor (out Female blood DNA was isolated from one randomly chosen donor (out of 10 female donors) and partially digested with a combination of scorl into the party segments 1&2 or either Mbol or DnII for library segments 3&4. Size selected DNA was cloned into the pBACe3.6 vector between the EcoRI sites for library segments 1&2 or the Bamil sites for library segments 3&4. The segments 1&2 or the Bamil sites for library segments 3&4. The library into ducts were transformed into DHIOB electrocompetent ligation products were transformed into DHIOB electrocompetent cells (BRL Life Technologies). The library has been arrayed into density filters for screening by probe hybridization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MARPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis

The RPCI-13 Human Female BAC Library was constructed using improved cloning techniques developed by Kazutoyo Oseegawa. The library was generated by Bachui Zhao in our laboratory. Construction was funded by a grant from the National Human Genome Research Institute (NHGRI, NHH) (#1R01RG01165-03). The library was generated according to the new NHGRI/DOE 'Guidance on Human Subjects in Large-Scale DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (02-NOV-2002) Department of Genetics, Washington Submitted (02-NOV-2002) Bark Avenue, St. Louis, Missouri 63108, USA On Oct 2, 2002 this sequence version replaced gi:20486437.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0.5); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

/jote="25GG38.77c, possible ABC transporter ATP-binding protein, len: 600 aa; similar to TR:P71082 (EMBL:282044) Bacillus subtilis unidentified transporter-ATP binding Ygap, 589 aa; fasta scores: opt: 1229 z-score: 1240.6 E(): 0; 34.2% identity in 576 aa overlap. Contains Pfam matches to entries PF00664 ABC membrane, ABC transporter and matches to Prosite entries P500005 ABC tran, ABC transporter and matches to Prosite entries P500017 ATP/GTP-binding site motif A (P-loop) and P500211 ABC transporters family signature. Also contains possible hydrophobic membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="28CG38.38, possible mark-family regulator, len: 153 aa; similar to TR:Q9RDN9 (EMBL:AL133423) Streptomyces coelicolor putative mark-family transcriptional regulator SC4A7.26, 151 aa; fasts socres: opt: 200 z-score: 252.2 E(): 1.3e-06; 36.1% identity in 147 aa overlap. Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                  NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                   This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The RECI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence from base 134927 to base 135119 was derived from one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 There is an unresolved tandem repeat from base 1359 to 12000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence from base 942 to base 1018 was derived from one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence is the entire insert of the clone.

len: 463 aa, from Mycobacterium tuberculosis strain H37Rv,

(100.0% identity in 463 aa overlap). Conserved
hypothetical protein, similar to other conserved
hypothetical proteins and some nicotinate of the phosphoribosyltraneferase e.g. NP_213718.1|NC_000918
hypothetical protein from Aquifex acolicus (426 aa);

All09962|T36953|SCJJ.20 conserved hypothetical protein
from Streptomyces coelicolor (438 aa), FAGTA scores: opt:
1089, E(): 0, (49.4% identity in 385 aa overlap);
p.31053.1|Z99120|SB01007157|NC_000964 protein similar to
nicotinate phosphoribosyltraneferase from Bacillus
subtilis (490 aa), FASTA scores: opt: 955, E(): 0, (43.5%
identity in 356 aa overlap); etc. Also similar to
Q10641|Y03P MYCTU|MTCY130.15c|Rv1330c CONSERVED
HYPOTHETICAL PROTEIN from Mycobacterium tuberculosis (509
aa), FASTA scores: opt: 761, E(): 0, (38.4% identity in

SC3C9.01c, uvrB, excinuclease ABC subunit B (fragment),
len: >635 aa, highly similar to SW:UVRB_BACSU
(RMBL-AF017113) Bacillus subtilis excinuclease ABC subunit
B (DinA protein) UvrB or DinA or Uvr aa, fasta scores:
opt: 2591 Z-score: 2687.6 bits: 507.5 E(): 4.3e-142,
63.667% identity in 600 aa overlap. Contains Pfam matches
to entries PF00270 DBAD, DBAD/DBAH box helicase and
PF00271 helicase C, Helicase conserved C-terminal domain
and match to Prosite entry PS00017 APP/GTP-binding site
motif A (P-loop). Also contains a possible coiled-coil
region at approx. residues 273. .290"

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                          Direct Submission
